I am extremely disappointed with the service. The support team took several days to respond to my issue and even then the problem was not resolved properly. I was transferred between multiple representatives and had to repeat the same information several times. The product quality did not meet my expectations and the overall experience was frustrating. Due to these issues, I am considering switching to a competitor and would not recommend this service to others.

Customer Satisfaction Level: Low

Business Risk Level: High

Confidence Score: 54.00%

Recommendation:

Immediate attention required. Investigate customer concerns and resolve issues quickly.

AI Generated Summary

The machine learning model analyzed the submitted customer feedback and classified it as **Negative**.

The prediction confidence is **54.00%**, indicating a reliable sentiment assessment.

This feedback suggests a **low customer satisfaction level** with a **high business risk profile**.

Project Highlights

- ✓ Natural Language Processing (NLP)
- ✓ Text Cleaning & Lemmatization
- ✓ TF-IDF Feature Engineering
- ✓ Extra Trees Classifier
- ✓ 89.71% Test Accuracy
- ✓ 89.88% Cross Validation Score
- ✓ Real-Time Sentiment Prediction
- ✓ Business Recommendation System
